N8N WORKFLOWS

n8n workflows for complex business processes

Multi-step n8n workflows that collect data from many sources, classify it with AI and write it to your systems. We turn manual business processes into AI-powered ones.

01 What we do - manual work, turned into a workflow

- **Collect from many sources.** Email, forms, news, job boards and your own systems, pulled into one workflow.
- **Classify with AI.** Claude reads each item, tags it and pulls out the fields you need, with the source and a quote you can check.
- **Write to your systems.** The result lands where your team works: the CRM, the calendar, email or a report.
- **Check the process.** Control systems that check your team followed the process and standards.

02 Case studies - workflows we built

- **AI signal monitoring for executive search: 7,394 headlines down to 164 real events.** An executive-search firm needed to know first when a target company changes its leaders, owner or plants. owlab.group/case-studies/ai-signal-monitoring
- **An AI recruiting agent that books interviews on its own.** A US security services company was losing recruiter time to the same steps for every applicant: write, screen, find a slot. owlab.group/case-studies/ai-recruiting-agent
- **AI alt text for a catalogue of 90,000 product photos.** A US store for antiques and architectural salvage had less than a year to make its site accessible. owlab.group/case-studies/ai-alt-text-automation

03 How we start - a small first step, checked on your data

- **1. A clear, limited scope.** We start with a clear, limited scope and agree up front how we'll check the result.
- **2. A fixed-price first piece.** A pilot, a first stage or one module. It starts at $1,000. You pay half at the start and half after we check it on your data. Before you pay, we name every running cost after launch as a number: what, to whom and when.
- **3. Your code.** You own the code and IP when the project is completed.
- **4. NDA.** We sign an NDA on request and share project details only with your approval.

04 Common questions – we hear.

- **What can an n8n workflow take over?** Multi-step processes that collect data from many sources, classify it with AI and write it to your systems. For a RevOps agency in the DACH region we built signal monitoring for its executive-search client, on n8n and Claude. In test runs it went through 7,394 headlines for 203 companies and narrowed them to 809 likely events; 164 held up after a human check.
- **Do you also work with Make?** Yes. We lead with n8n, and we build on Make when your team already uses it.
- **Can the workflow run on our own server?** Yes. n8n can run on your own server, so the workflow and the data stay with you.
- **Can we start small?** Yes. The first step is a small, fixed-price piece: a pilot, a first stage or one module. It starts at $1,000. You pay half at the start and half after we check it on your data. Before you pay, we name every running cost after launch as a number: what, to whom and when.
- **Do you sign an NDA?** Yes. We sign an NDA on request and share project details only with your approval.

05 Next step – tell us which process takes your team the most time

Tell us what you need, and Vitaliy replies himself.
