ENGINEERING PARTNER FOR VIBE-CODED PRODUCTS

You vibe-code, we're your engineering partner

We clean up after you, fix what breaks and keep the code in good shape as the product grows.

PREPARED BY
Owlab
Tallinn, Estonia

WE PICK UP APPS BUILT ON
Lovable · Bolt · v0

FIRST STEP
A short call

01 What we do - the engineering team behind your product

- **Fix what breaks.** We find why it breaks, fix it and test the flows your users depend on, like sign-up, booking and checkout.
- **Check payments and security.** We read the code behind payments, sign-in and user data, and close the gaps before real users find them.
- **Finish it or move it.** We pick up apps built on Lovable, Bolt or v0: we finish them or move them to your own codebase.
- **Keep building with you.** You keep building with AI tools. We take the parts they struggle with and keep the code in good shape as the product grows.

02 Case study - a platform its founder built with AI tools

HeyRover

HeyRover, a booking platform for pet-care facilities in Australia, was built by its founder with AI tools. We became the engineering team behind it: we tested the critical flows, checked payments and security in the code, hardened the AI voice receptionist and built new screens in the platform's own style.

- Critical flows tested
- Payments and security checked in the code
- AI voice receptionist hardened
- New screens in the platform's own style

03 Common questions – we hear.

- **Can you fix my Bolt app?** Yes. We pick up apps built on Lovable, Bolt or v0: we finish them or move them to your own codebase. First we find why it breaks, then we fix it and test the flows your users depend on.
- **Do you take over Lovable projects?** Yes. We fix what breaks, build what the tool struggles with and keep the code in good shape as the product grows.
- **How do we get a v0 prototype ready for real users?** We check the code behind payments, sign-in and user data, fix what breaks and test the critical flows. Then we finish the app or move it to your own codebase.
- **Will you rewrite everything from scratch?** Not by default. We start from what works and fix what breaks. If a part has to be rebuilt, we tell you which part and why before we start.
- **Can we start small?** Yes. The first step is a small, fixed-price piece: a pilot, a first stage or one module. It starts at $1,000. You pay half at the start and half after we check it on your data.
- **Who owns the code?** You own the code and IP when the project is completed.

04 Next step – tell us what your app does and what breaks

Tell us what you need, and Vitaliy replies himself.
